

SaaS product pitch deck best practices 2026 campus placement platform market trends
2026 B2B SaaS deck design principles storytelling

23 results

Based on my analysis of your deck and current market research, here are high-impact improvements organized by priority. The campus recruitment platform market is valued at \$2.15B in 2026 and growing at 6.8% CAGR , so positioning matters significantly.

Critical Missing Elements

1. Lead with Traction, Not Just Vision

Your deck reads like a product spec. For a B2B SaaS at this stage, investors and pilot customers want proof points. Add a "Traction & Validation" slide before the product deep-dive with:

Pilot institution names (even if LOI-stage)

Employer partners committed

Student count in sandbox

Any revenue or pipeline metrics

Key metrics: CAC, time-to-hire reduction, admin hours saved

"At seed stage, investors expect customer validation, product usage, revenue signs, and pipeline"

2. Quantify the Problem

Your "fragmentation" slide lists symptoms but lacks scale. Replace the icons with hard numbers:

"78% of TPOs spend 15+ hours/week on manual coordination"

"Employers repeat onboarding with 40+ campuses per season"

"Students miss 30% of deadline updates due to channel fragmentation"

Cite industry data: AI is cutting hiring cycles by 40% — frame PlacementHub as the enabler of this efficiency for the campus niche.

3. Add a "Why Now" Slide

Missing entirely. The market is at an inflection point:

Campus recruitment platforms are shifting from on-premise to cloud SaaS

Skills-based hiring is overtaking degree-centric filtering

AI-powered screening is now table stakes, not a differentiator

Your rules engine and partnership-gated workflow address this shift — but you need to name the timing explicitly.

Structural & Narrative Fixes

4. Flip the Agenda: Problem → Traction → Solution → Market

Current flow is too linear and internal. Restructure:

Table

Current	Improved
---------	----------

Why PlacementHub	The \$2.15B campus hiring problem
------------------	-----------------------------------

Roles & Access	Traction & pilot validation
----------------	-----------------------------

Opportunity Modules	Solution: The "Operating System"
---------------------	----------------------------------

Feature Deep-Dives	Market size & competitive moat
--------------------	--------------------------------

Season Workflow	Business model & GTM
-----------------	----------------------

(end) Team & ask

"For B2B SaaS with some traction, flip the deck order: lead with the traction chart, not the problem"

5. Competitive Landscape Slide

You mention Handshake, Symplicity, JobTeaser implicitly but never address them. Add a 2x2 matrix:

X-axis: Generic vs. Campus-specific

Y-axis: Job board vs. Full workflow OS

Place PlacementHub in the top-right: campus-specific + full lifecycle governance. Your moat is the rules engine + partnership gate + multi-tenant architecture — say this explicitly.

6. Business Model Slide

Completely absent. Define:

Pricing: Per-student/year? Per-campus subscription? Freemium for employers?

Unit economics: ACV, expansion revenue from alumni module

Revenue expansion path: mentorship fees, employer sponsored posts, analytics premium

Content & Visual Improvements

7. Simplify the "Feature Deep-Dives"

You have ~40 features listed across slides. This overwhelms. Instead, use 3 pillars:

Table

Pillar	What it solves	Key feature
--------	----------------	-------------

Govern	Policy enforcement chaos	Rules engine, audit logs, FCFS
--------	--------------------------	--------------------------------

Connect	Fragmented coordination	Partnership gating, unified calendar
---------	-------------------------	--------------------------------------

Grow	Beyond placements	Alumni, mentorship, hackathons
------	-------------------	--------------------------------

Then deep-dive only the rules engine (your true differentiator) with a visual workflow diagram.

8. Make the "Founder" Slide Credible

Current slide is a bullet list. Instead:

Add a founder-market fit story: "After 30 years staffing 500+ campus drives, I watched the same Excel crash every season"

Add advisor logos or key relationships

Move this slide earlier if you're the primary credibility driver at this stage

9. Student Journey → Visual Flow

Replace the 9-step numbered list with a horizontal swimlane diagram showing:

Student actions (top lane)

System validations (middle lane: CGPA, deadlines, rules)

Admin visibility (bottom lane)

This visualizes your core value: automated governance.

10. End with a Clear "Ask"

Your final slide says "Immediate next steps" but doesn't specify:

Funding ask (if pitching investors): "Raising \$X for pilot expansion"

Pilot commitment (if pitching colleges): "Seeking 3 anchor institutions for Fall 2026"

Partnership targets (if pitching employers): "Onboarding 10 enterprise partners by Q3"

Quick Wins (Can Implement Today)

Table

Slide Fix

Title Add subtitle: "The governance layer for campus hiring" — clarifies you're not just another job board

Fragmentation Replace 5 icons with one screenshot of a chaotic WhatsApp/Excel mess vs. PlacementHub dashboard

Capability Matrix Remove the table; use role-based mini-profiles (Student: "Apply with confidence", Employer: "Hire at scale", etc.)

Platform Strengths Merge into a single "Trust & Scale" slide with security badges, uptime stats, compliance notes

Current Status Add a timeline graphic: Sandbox → Pilot → Production → Scale

Summary: Top 5 Priority Changes

Add traction metrics — even preliminary numbers beat zero proof

Insert "Why Now" + competitive positioning — market timing is your friend

Restructure for investor/customer psychology — problem → traction → solution → market

Define business model — SaaS without pricing is just a product demo

Visualize the rules engine — this is your IP; make it tangible
