

PlacementHub — Functionality, Features & Flows

Version: June 2026 (sandbox / pre-launch)

Audience: Product, engineering, QA, college TPOs, and employer partners

Scope: What the platform does, how roles interact, and the main end-to-end journeys

1. What PlacementHub is

PlacementHub is a **multi-tenant campus placement and engagement platform**. It connects three primary audiences on one system:

Audience	Primary job on the platform
Students	Discover opportunities, apply, attend interviews, respond to offers
College admins (TPO / placement office)	Run the placement season, approve employers, enforce rules, coordinate selection
Employers	Partner with campuses, publish roles and drives, run hiring, record offers

A **super admin** layer operates the whole platform: onboarding colleges and employers, user support, global settings, and audit visibility.

Beyond core placement, the product supports **internships, short projects, hackathons, alumni hiring, sponsorships, startup seed funding, guest faculty, and campus calendars** — so industry engagement and final placements live in one place rather than scattered spreadsheets and email threads.

2. Multi-tenant model

Every college is a **tenant**. Data is scoped by tenant:

- Students belong to one college tenant.
- Employers are **cross-tenant**: one company account can request tie-ups with many colleges.
- **Employer–campus partnerships** (employer_approvals) gate what an employer can see or do for each institute (pending → approved → rejected).
- **Academic years** and **placement season** labels separate batches and reporting across years.

Employers work across **all approved campuses** (campus switcher is disabled; the top bar shows “All campuses”). Per-screen campus dropdowns still exist where a specific campus context is required (assessments, interviews, some exports).

3. Roles and access

Role	Signs up via	Home after login
Student	Not self-service — college provisions the master list; student receives login email	Student dashboard
Employer	/register (platform approval may apply)	Employer dashboard
College admin	/register or super-admin onboarding	College dashboard
Super admin	Provisioned by platform ops	Admin dashboard

Alumni students are flagged on the student account; they see alumni job browse/apply menus instead of campus placement drives.

Navigation is **role-based** (sidebar + full-screen hub). Alerts, data export, and feedback are shared across roles where enabled.

4. Opportunity types (programs)

PlacementHub treats each program type as a first-class pipeline with its own browse, apply, and application tabs.

Type	Typical use	Who publishes	College gate
Placement drives	On-campus / virtual hiring events linked to roles	Employer requests; college approves	Drive visibility + employer partnership
Jobs	Full-time, part-time, PPO	Employer publishes to selected campuses	College approves listing visibility per campus
Internships	Summer / semester internships	Employer	College approves visibility
Short projects	Portfolio / exposure work	Employer	College approves visibility
Hackathons	Competitions (optional PPO link)	Employer	College approves visibility
Alumni jobs	Lateral roles for graduated alumni	Employer	Published to alumni on campus

Students apply from **Browse** screens; status is tracked under **My Applications** (separate tabs per type). Employers manage listings under **Student Opportunities**; colleges monitor **Applications** and program boards.

5. Features by role

5.1 Student

Area	Capabilities
Profile & documents	Academic details, skills, resume and proofs; profile completion guidance
Discovery	Browse drives, jobs, internships, projects, hackathons; placement calendar
Applications	Apply before deadlines; track status (applied → shortlisted → in progress → selected, etc.)
Selection	My Interviews; view hiring outcomes where exposed
Offers	Review and accept/decline per college rules
Communication	Clarifications (official Q&A batches); alerts; feedback
Compliance	Eligibility checks (CGPA, backlogs, batch year, deadlines); withdrawal flows
Privacy	My data export (where supported)

5.2 Employer

Area	Capabilities
Organization	Company profile, sponsorships, startup seed funding, campus guest needs
Partnerships	Request campus tie-ups; track approved / pending / rejected
Publishing	Internships, placement drives, projects (and jobs via dedicated flows)
Recruitment & selection	Hiring Results Dashboard (read); Assessment uploads (CSV); Assessment Update Online (write); Assessment map (round labels, legacy)
Pipeline	Applications; FCFS “unavailable” list; offers (including CSV upload from Offers page)
Operations	Interview scheduling; events calendar
Communication	Clarifications, discussions, email templates, feedback

5.3 College admin (TPO)

Area	Capabilities
------	--------------

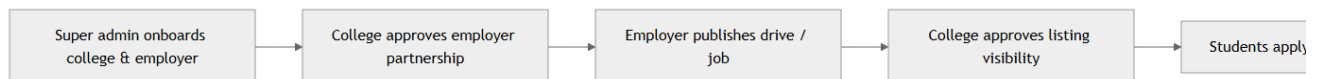

Partnerships	Approve/reject employer requests; employer directory
Programs	Placement drives board; internships; internship results
Students	Master list, verification, add student, enrollment key
Pipeline	Campus applications board; offers
Evaluation	Hiring Assessment (read-only mirror of employer results); interview scheduling
Rules	Placement rules (CGPA, offer limits, season dates, FCFS, etc.)
Engagement	Calendar, events, guest faculty & lectures, sponsorships, startup funding
Insights	Reports, audit reports
Communication	Clarifications (publish batches), discussions, templates, feedback

5.4 Super admin

Area	Capabilities
Directory	Colleges, employers, users, placement listings, archived students
Onboarding	Pending registrations (college + employer approval queue)
Operations	Feedback inbox, error logs, email logs, audit reports
Configuration	Platform settings (SMTP, branding URLs, feature-related globals)

6. End-to-end flows

6.1 One placement season (all roles)

Narrative: Platform enables a college and employer → TPO approves the partnership → employer publishes opportunities → college curates visibility → students apply → employer runs selection (CSV/online assessments, interviews) → offers are recorded → college placement rules (e.g. one FT offer, FCFS) apply → leadership closes the season with reports.

Deployments may skip steps (auto-approved employers) or add steps (extra assessments). Role-specific sections below are the day-to-day source of truth.

6.2 Student journey

1. **Provisioned** by college (CSV / add student) — receives login email (no self-registration on /register).
2. **Sign in**, complete **My Profile** and **Documents**.
3. **Browse** drives, internships, jobs, projects, or hackathons; use **Placement calendar** for dates.
4. **Apply** before each deadline; eligibility enforced (CGPA, backlogs, batch, deadline; branch matching is display-only until taxonomy ships).
5. Track **My Applications**; respond to **My Interviews** and **Alerts**.
6. Read **Clarifications** from the placement committee.
7. Act on **My Offers** per institute policy.

6.3 Employer journey

8. **Register** (or be onboarded by super admin); complete **Company Profile**.
9. **Campus Partnerships** — request tie-ups; wait for college **approved** status.
10. **Publish** internships, drives, projects; select campuses where posting constraints allow.
11. **College approves** job/internship visibility per campus where required.
12. **Recruitment & selection:**

- Enter results via **Assessment uploads (CSV)** or **Assessment Update Online** (hiring_result: Shortlist, Reject, Select, Decline, Withdraw).

- Review on **Hiring Results Dashboard**; **Submit results** when final.

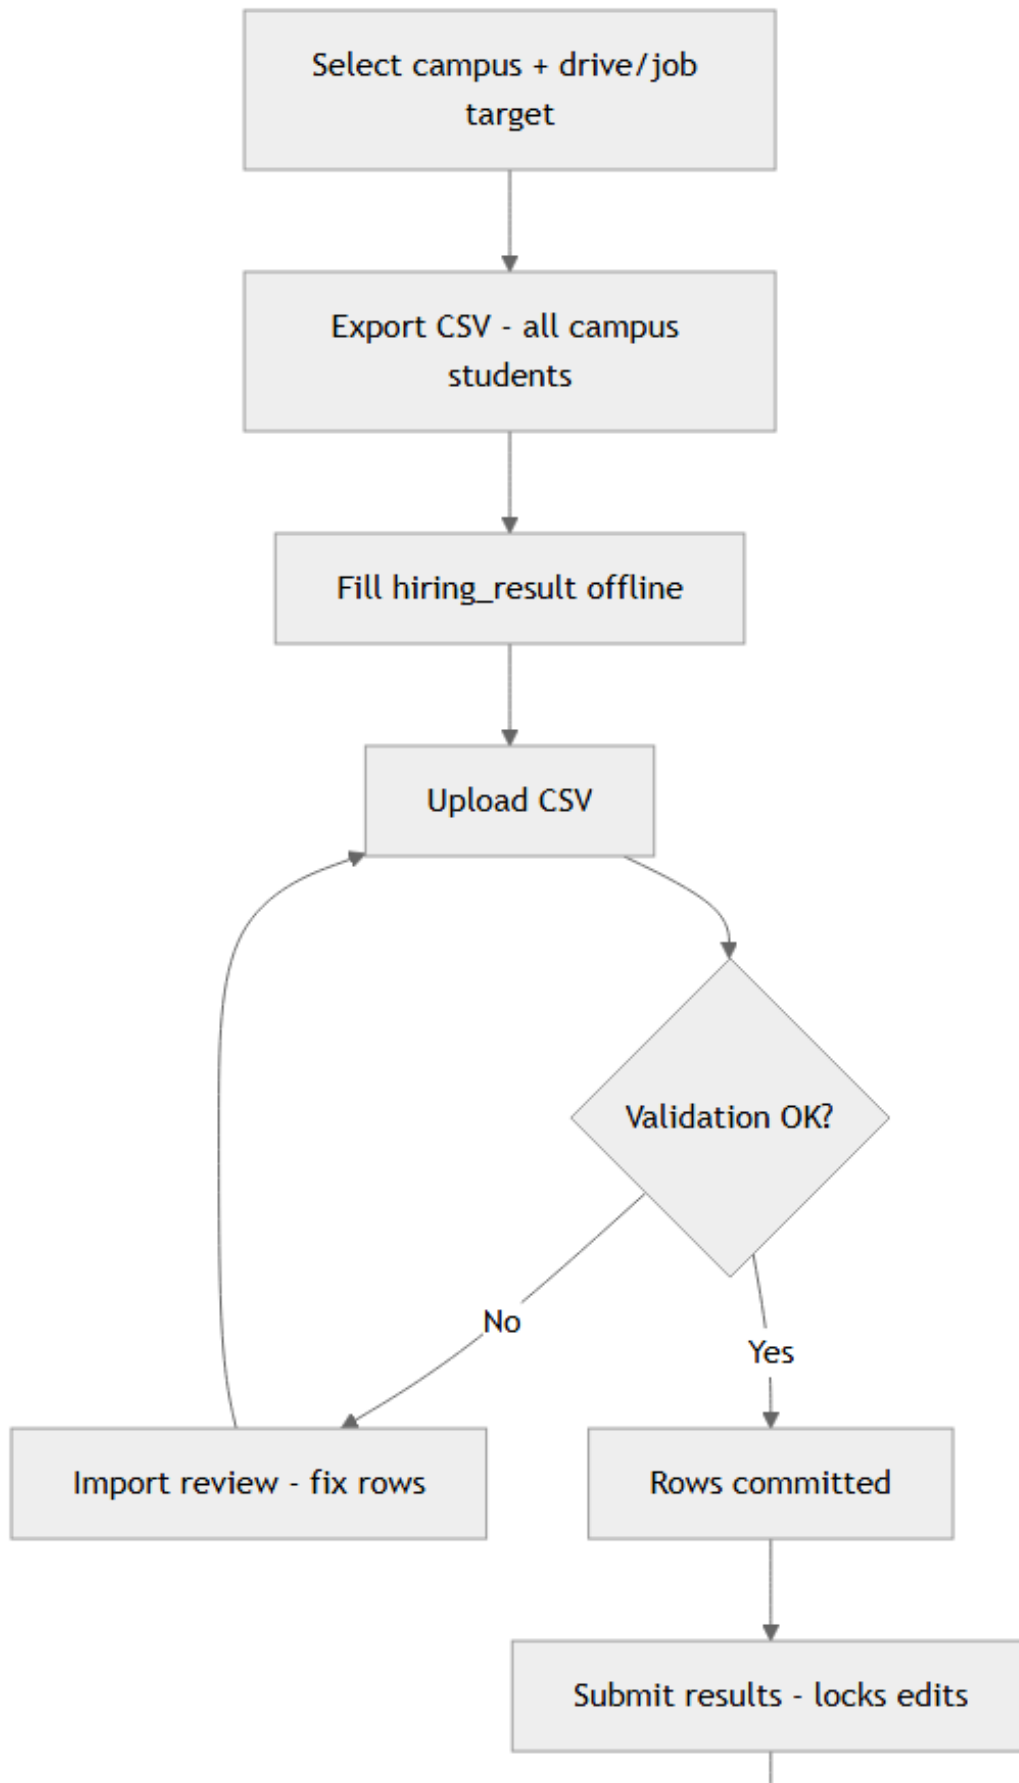

- Schedule interviews; review **Applications**.

13. Record **Offers** (UI or CSV from Offers page).
14. Participate in **Clarifications / Discussions** when the college publishes threads.

6.4 College admin journey

15. Configure **Settings** (season label, policies exposed in product).
16. **Approve employer partnerships** before companies run on campus.
17. Manage **Students** — verify profiles; rotate **Enrollment key** if needed (legacy flows; students are primarily provisioned directly).
18. Curate **Placement drives / Internships** visibility.
19. Monitor **Applications** and **Offers**; mirror employer **Hiring Assessment** (read-only).
20. Coordinate **Interview Scheduling** with employers.
21. Publish **Clarifications**; moderate **Discussions**.
22. Enforce **Placement Rules**; export **Reports / Audit reports**.

6.5 Assessment CSV workflow (employer)

Alternative: Assessment Update Online — same data model, inline edits, no file.

Assessment updates are **dashboard-visible**; they do not email students by default.

7. Key subsystems

7.1 Employer–campus partnerships

- Employer requests access from **Campus Partnerships**.
- College approves via **Employer Partnership Requests**.
- Until approved, employer actions for that tenant are blocked or empty at the API layer (employer_approvals).
- Employers see a **directory of all colleges** (for requests), not only approved ones.

7.2 Job posting visibility

- Employer publishes a job/internship/project to selected campuses.
- Each campus has a **college_status** on visibility (pending / approved / rejected).
- Students only see **approved, published** listings for their tenant.

7.3 Placement drives

- Employer **requests** a drive with role details, dates, venue, eligibility.
- College **approves** the drive; students **register/apply**.
- Drive lifecycle includes scheduled, in progress, completed; venue warnings surface when date is near and venue unconfirmed.

7.4 FCFS (first-come-first-served)

When enabled in college settings, the **first employer to confirm** a student on a track (internship, placement, jobs) blocks other employers from selecting that student on the same track for that campus. **Unavailable (FCFS)** on the employer menu lists students already claimed.

7.5 Placement rules (college)

Configurable per tenant, including:

- Offer limits (e.g. max simultaneous offers)
- Minimum CGPA and backlog rules
- Placement season windows
- FCFS enablement
- Academic year scoping on drives and postings

Rules are enforced at apply time and offer time where implemented.

7.6 Communication

Channel	Purpose
Alerts	In-app notifications (applications, approvals, reminders)
Email	Transactional mail (welcome, selection, password reset, etc.); super-admin Email logs
Clarifications	Official batched Q&A — college publishes questions/answers for employers
Discussions	Moderated threads where enabled
Email / message templates	Reusable copy for college and employer outreach

7.7 Data export & audit

- **My data export** — role-scoped self-service downloads where supported.
- **Audit reports** — college and super-admin compliance views.
- CSV export on many tabular screens (applications, assessments, interviews, offers).

7.8 Help & feedback

- In-app **Help** widget — natural-language answers from indexed help docs (sync via npm run qa:sync-help-knowledge).
- **Feedback** — product feedback routed to admin inbox.
- **Developer Notes** (/developer) — QA runbooks, demo APIs, guided runner (password-gated).

8. Accounts and security (summary)

Topic	Behavior
Student onboarding	College adds to master list; student signs in with issued credentials — not via public student registration
Employer / college signup	/register with captcha; may require super-admin approval before first login
Sessions	Role-based dashboard access; middleware protects routes
Dev / QA surfaces	/developer, /data-entry password-gated; screen ID pills for guided testing (hide in production via env)
Multi-tenant isolation	Tenant ID on student data; employer campus scope checked on sensitive APIs

9. Engagement modules (beyond core placement)

Module	Employer	College
--------	----------	---------

Sponsorships	Offer sponsorships	View / coordinate
Startup seed funding	Apply / track	Review campus startups
Campus guest needs	Respond to lecture needs	Guest faculty & lectures — list needs
Events & calendar	Employer calendar	College calendar + events

These share the same tenant and partnership model as hiring but do not replace the application/offer pipeline.

10. Alumni

- Employers post **alumni jobs** (lateral roles).
- Alumni-flagged students browse **Alumni Jobs** instead of campus placement drives.
- Separate application tabs and interview flows where configured.
- **Alumni Job Assessment Online** on employer menu for alumni hiring updates.

11. Platform matrix (quick reference)

Capability	Student	Employer	College	Super admin
Browse / apply to programs	✓	—	monitor	—
Publish drives & listings	—	✓	approve	listings admin
Assessment results entry	view	✓ CSV/online	read-only	—
Interview scheduling	view	✓	✓	—
Offers	accept/decline	✓ + CSV	monitor	—
Placement rules	subject to	—	configure	—
Partnership approval	—	request	approve	—
User / tenant admin	—	profile	students	✓
Audit / email logs	export self	export self	audit	✓

12. Related documentation

Document	Use when
docs/help/README.md (help/README.md)	Role-specific help markdown (synced from in-app help)

docs/help/use-case-flows/ (help/use-case-flows/)	Step-by-step flows per role
PRODUCT.md (../PRODUCT.md)	Product purpose, users, brand tone
DESIGN.md (../DESIGN.md)	UI / design principles
/developer (../src/content/developerNotes.js)	QA playbooks, demo APIs, pending backlog
docs/help/developer/database-schema.md (help/developer/database-schema.md)	Tables and relationships

13. Glossary

Term	Meaning
TPO	Training & Placement Officer; college admin role
Tie-up / partnership	Approved link between employer and college tenant
hiring_result	Employer assessment outcome: Shortlist, Reject, Select, Decline, Withdraw
FCFS	First-come-first-served locking of a student on a track per campus
Tenant	One college instance in the multi-tenant database
Visibility row	Per-campus approval state for a job posting
Guided Runner	QA automation that steps through screens using dev screen IDs

This document describes intended product behavior for the current sandbox build. Some help pages may still mention student self-registration with an enrollment key; production provisioning is college-driven. For the latest menu names, use the in-app sidebar or `src/config/dashboardMenu.js`.
